Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 December 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6463172 to Yoshimura in view of JP 8221546 to Masayuki (a reference of PTO 1449).

As to claim 1, Yoshmura discloses an image processing method comprising:

receiving selection of a target image having a desired color tone from a plurality of reference images each having a different color-tone (col. 1 line 40-col. 3 line 50, col. 6 lines 53-69);

receiving specification of an image in an image display (col. 1 line 40-col. 3 line 50); and

changing color tone of a specified image to the target color tone of the selected image (col. 3 lines 12-51, and col. 6 lines 53-69).

Yoshmura does not explicitly mention selecting an area from the image.

Masayuki, in an analogous environment, discloses selecting an area of an image and then to match the color tone of the area with a desired tone.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the scheme of Masayuki in the method of Yoshmura in order to process the color matching easily for a user without any special knowledge or technique (Masayuki, abstract).

As to claim 2, Yoshmura further discloses generating plurality of reference images before receiving the selection of the target image (col. 6 lines 53-69).

As to claims 3-6, the claims are corresponding apparatus and computer readable medium claims to claims 1-2, and the discussion is addressed with regard to claims 1-2.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5333069 to Spence, US 6343141 to Okada et al., and US 5130935 to Takiguchi disclose methods for color tone conversion.
